What Is a Hair Transplant?

A [hair transplant](#) is a ornamental surgery where healthy hair follicles are moved from one area of the crown(the patron area) to the balding or lacing areas(the philanthropist area). The two most extensively used styles are

FUE(Follicular Unit birth) A new and least invasive fashion where follicles are taken one by one and planted.

FUT(Follicular Unit Transplantation) A crown strip with follicles is gutted and scattered to the area of choice.

Our platoon at Nirog360 employs sophisticated FUE and FUT ways to give safe, natural, and long- term issues. Every procedure is customized to fit the customer's individual crown condition and hair growth pattern, so the hair transplant after ahead outgrowth is nothing lower than phenomenal.

Hair Transplant After Before The Real Transformation

In the case of hair transplant after ahead prints, the discrepancy is absolutely life- altering. Prior to the surgery, utmost people find themselves with thinning cinches, patches of baldness, or a retreating hairline. A many months of mending and growth latterly, cases generally have thicker, fuller, and natural- looking hair. Before the Hair Transplant

The maturity of cases who conclude for [Nirog360](#) suffer

- * Visible bald areas or thinning on the crown
- * retreating hairline or asymmetrical hair consistence
- * Loss of confidence in social or professional life

Before the procedure, our experts perform a crown analysis in order to identify the number of grafts demanded, the strength of the patron area, and the stylish course of treatment.

After the Hair Transplant

Post-procedure, the metamorphosis begins gradationally. Within a many weeks, you'll notice mild slipping — a normal part of the growth cycle known as “ shock loss. ” By the third or fourth month, new hair starts growing, and within 9 – 12 months, cases enjoy full, natural hair growth.
